

## Suggested Indoor Shooting Range Layout – January 2019

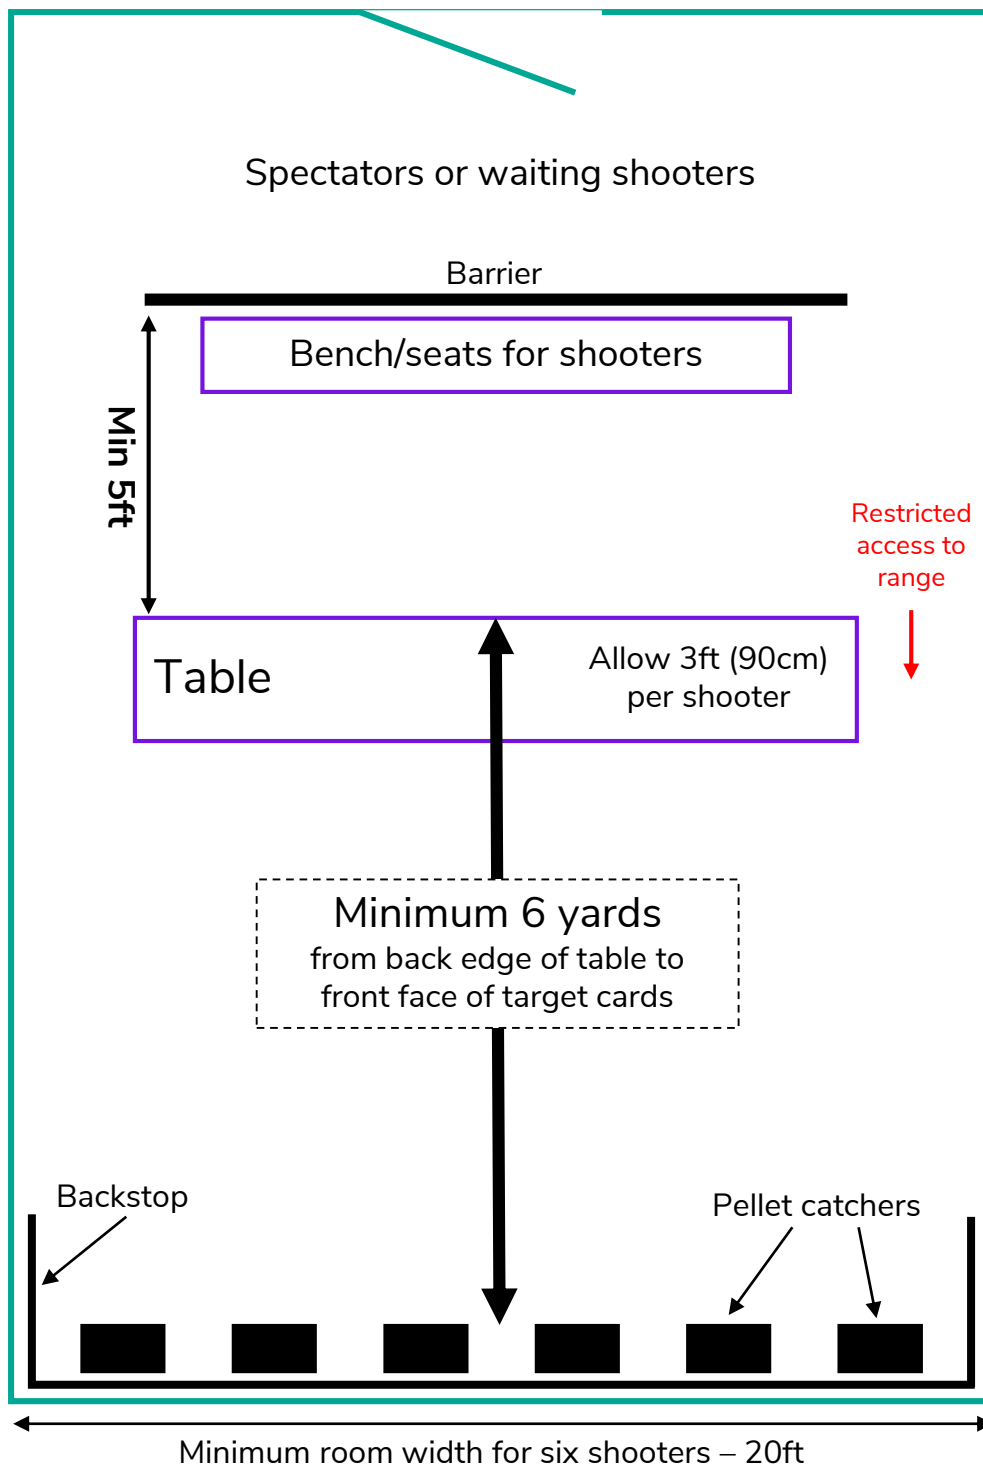

Diagram not to scale.

### Notes:

*This diagram is indicative only.*

- 6 yards is the minimum distance for safe airgun shooting.
- Security of the area in front of the firing points is vital. Any doors in front of the shooters' table must NOT be capable of being opened from the outside.
- It is desirable to have a separate area where shooters may be briefed before entering the range.
